

HUBLLOT

KING POWER UNICO GMT

The now famed Unico manufacture chronograph movement has undergone its first ever evolution. Its base will now house a GMT function, which has been entirely developed and manufactured in-house by Hublot.

The main technical feature of this GMT complication is that it gives the time in the different time zones using an expert set of 4 rotating aluminium discs. They are controlled by a push-button housed in the case middle at 2 o'clock which allows the discs to be simultaneously positioned, allowing the time in the city, selected from the 14 available, to be instantly and directly read.

With an elegant, practical and functional design, the King Power Unico GMT has a 48 mm dial and is available in two versions, ceramic or King Gold red gold ceramic, featuring a dial which is easy to read despite the wealth of indications it contains, and which allows the beautiful mechanics of the calibre to be admired. With a 72-hour power reserve, this watch will appeal to travellers with an appreciation of fine contemporary watchmaking.

TECHNICAL DETAILS

References	771.CI.1170.RX (ceramic version) 771.OM.1170.RX (gold version)
